History

- Original document produced in 2011 entitled “Derivatives of Transcendental Functions” written by Robert G. Petry. Published by the Department of Mathematics, SIAST Palliser Campus. A transparent copy of this document is available via <http://www.campioncollege.ca/about-us/faculty-listing/dr-robert-petry>

1 Derivatives of Trigonometric Functions

In this course we have sufficient rules to differentiate any function we can imagine except for special functions like $\sin x$ or e^x . In order to differentiate such functions one has to appeal to the fundamental definition of the derivative:

$$\frac{dy}{dx} = \lim_{\Delta x \rightarrow 0} \frac{\Delta y}{\Delta x} = \lim_{\Delta x \rightarrow 0} \frac{f(x + \Delta x) - f(x)}{\Delta x},$$

and carefully consider the properties of the function in question. For instance, one may use geometric considerations (see Text p. 943) to determine that the derivative of $y = \sin x$ is:

$$\frac{dy}{dx} = \frac{d(\sin x)}{dx} = \cos x$$

Here and in the other formulas, the angular variable x **must be in radians**. The derivative of $y = \cos x$ is:

$$\frac{dy}{dx} = \frac{d(\cos x)}{dx} = -\sin x$$

Note the minus sign in the last equation. Using these two relations, trig identities, and our basic rules of differentiation one can find other trigonometric derivatives as shown in the following example.

Example

Find the derivative of $y = \tan x$. (Hint: Use that $\tan x = \frac{\sin x}{\cos x}$.)

The following table summarizes the trig function derivatives.

$\frac{d}{dx}(\sin x)$	$= \cos x$	(1)
$\frac{d}{dx}(\cos x)$	$= -\sin x$	(2)
$\frac{d}{dx}(\tan x)$	$= \sec^2 x$	(3)
$\frac{d}{dx}(\cot x)$	$= -\csc^2 x$	(4)
$\frac{d}{dx}(\sec x)$	$= \sec x \tan x$	(5)
$\frac{d}{dx}(\csc x)$	$= -\csc x \cot x$	(6)

Often these formulas will be written more generally as (for instance):

$$\frac{d}{dx}(\sin u) = \cos u \cdot \frac{du}{dx}$$

to indicate that the chain rule must be applied if the argument of the trig function differs from the variable which is being differentiated. Such notation is shown in the chain rule versions of our derivative formulas on the formula sheet. One must remember that the chain rule ($\frac{dy}{dx} = \frac{dy}{du} \frac{du}{dx}$) is required if the argument does differ from the variable differentiated. For instance, if $y = \sin(x^2)$ then

$$\frac{dy}{dx} = \frac{d}{dx} \underbrace{(\sin x^2)}_{y=\sin u} = \underbrace{(\cos x^2)}_{\frac{dy}{du}=\cos u} \cdot \underbrace{\frac{d}{dx}(x^2)}_{\frac{du}{dx}} = (\cos x^2) \cdot (2x) = 2x \cos x^2$$

Note that here $\sin x^2 = \sin(x^2)$ not $(\sin x)^2$. The latter we would write $\sin^2 x$.

These trigonometric derivatives are still just derivatives. All the rules of derivatives, higher order derivatives, implicit differentiation, tangents, extreme values, rates of change, related rates, and max-min problems can be applied to such functions. Examples of each of these can be found in the assignment and the problems at the end of the unit.

Problems:

Ex. 2 (P. 951) # 1-41 (odd)

2 Derivatives of Inverse Trigonometric Functions

As with trigonometric functions, it is desirable to find derivatives of **inverse** trigonometric functions like $\arcsin x$ (also written $\sin^{-1} x$). Since if $y = \arcsin x$ one has that

$$\sin y = \sin(\arcsin x) = x$$

one can use implicit differentiation of the latter to find the derivative of \arcsin .

Example

Find the derivative $\frac{d}{dx}(\arcsin x)$. (Hint: Also use that if $\sin y = x = \frac{x}{1}$, then by the Pythagorean theorem $\cos y = \sqrt{1 - x^2}$.)

The following table summarizes the inverse trig function derivatives.

$\frac{d}{dx} (\sin^{-1} x)$	$= \frac{1}{\sqrt{1-x^2}}$	(7)
$\frac{d}{dx} (\cos^{-1} x)$	$= \frac{-1}{\sqrt{1-x^2}}$	(8)
$\frac{d}{dx} (\tan^{-1} x)$	$= \frac{1}{1+x^2}$	(9)
$\frac{d}{dx} (\cot^{-1} x)$	$= \frac{-1}{1+x^2}$	(10)
$\frac{d}{dx} (\sec^{-1} x)$	$= \frac{1}{ x \sqrt{x^2-1}}$	(11)
$\frac{d}{dx} (\csc^{-1} x)$	$= \frac{-1}{ x \sqrt{x^2-1}}$	(12)

Note that for \sin^{-1} and \cos^{-1} the derivative is only meaningfully defined where the function is, namely $|x| < 1$. For \sec^{-1} and \csc^{-1} one requires $|x| > 1$. Finally \tan^{-1} and \cot^{-1} have derivatives defined for all x .

As with the trigonometric derivatives, one simply uses these rules to differentiate any function that involves an inverse trig function. Examples may be found in the assignment and at the end of the unit.

Problems:

Ex. 3 (P. 956) # 1-21 (odd)

3 Derivatives of Logarithmic Functions

The derivative of the natural logarithm $\ln x$ gives the following surprisingly simple result:

$$\frac{d}{dx} (\ln x) = \frac{1}{x} \quad (13)$$

(See Text p. 956 for proof.)

Logarithms to bases other than e (the base of $\ln = \log_e$), introduce a constant factor of $\ln b$ in the denominator:

$$\frac{d}{dx} (\log_b x) = \frac{1}{x \ln b} \quad (14)$$

These rules can be used to differentiate logarithmic functions as they arise in any differentiation problem as shown in the assignment below and at the end of the unit.

Sec. 33-4

Problems:

Ex. 4 (P. 960) # 1-51 (odd)

4 Derivatives of Exponential Functions

The derivative of the exponential function of base e is very special indeed as it is the only functions whose derivative is itself!

$$\frac{d}{dx}(e^x) = e^x \quad (15)$$

Example

Prove that the derivative of e^x is itself. (Hint: Use that if $y = e^x$ then $x = \ln y$ and implicitly differentiate.)

For exponentials involving bases other than e one has to introduce the constant $\ln b$ as with logarithms:

$$\frac{d}{dx}(b^x) = b^x \ln b \quad (16)$$

Examples using these derivatives may be found in the assignment and at the end of the unit.

Problems:

Ex. 5 (P. 964) # 1-61 (odd)

5 General Questions

Use calculus techniques and the new derivative formulas from this unit to solve the following problems.

1. Find the derivatives of the following:

(a) $y = x^2 + \sin x + \cos^{-1} x - \ln x + 5^x$

(b) $y = \sin x \cos x$

(c) $y = \frac{\ln x}{x}$

(d) $y = \tan^2 x$

(e) $y = \frac{1}{\sqrt{2\pi}} e^{-\frac{x^2}{2}}$

(f) $y = 2\sqrt[3]{\sec^{-1} x}$

2. If $f(x) = \sin^{-1}(x)$, find $f''(x)$ and $f''(0)$.

3. Find the derivative $\frac{dy}{dx}$ of the implicitly defined function:

$$\ln y + x^3 = x^2 \cos y$$

4. Find the minima, maxima and inflection points of the function $y = \sin^2 \theta$ for $0 \leq \theta < 2\pi$.
5. The elevation above sea level of a hill (in km) is described by the function $y = xe^{-3x}$. Find the horizontal distance x at which the hill is a maximum as well the maximum elevation of the hill.
6. Find the horizontal distance x at which the hill is maximum from the last problem using *Newton's method*. (Hint: Since you will be solving $y' = 0$, you will want to call $f(x)$ in Newton's method your expression for y' . Then $f'(x)$ in the method will be your expression for y'' .)
7. An airplane flies horizontally away from you at a constant altitude of 10.0 km. When the plane is at a ground distance (horizontal) from you of 5.00 km find the rate of change of the angle of inclination of the plane from your point of observation if the plane is travelling at a speed of 250 m/s at that moment.

Solutions

$$1. \quad (a) \quad \frac{dy}{dx} = 2x + \cos x - \frac{1}{\sqrt{1-x^2}} - \frac{1}{x} + 5^x \ln 5$$

$$(b) \quad \frac{dy}{dx} = -\sin^2 x + \cos^2 x$$

$$(c) \quad \frac{dy}{dx} = \frac{1 - \ln x}{x^2}$$

$$(d) \quad \frac{dy}{dx} = 2 \tan x \sec^2 x$$

$$(e) \quad \frac{dy}{dx} = -\frac{x}{\sqrt{2\pi}} e^{-\frac{x^2}{2}}$$

$$(f) \quad \frac{dy}{dx} = \frac{2}{3} (\sec^{-1} x)^{-\frac{2}{3}} \frac{1}{|x| \sqrt{x^2 - 1}}$$

$$2. \quad f''(x) = x(1-x^2)^{-\frac{3}{2}}, \quad f''(0) = 0$$

$$3. \quad y' = \frac{2x \cos y - 3x^2}{\frac{1}{y} + x^2 \sin y}$$

$$4. \quad \text{relative minima: } 0, \pi$$

$$\text{relative maxima: } \frac{\pi}{2}, \frac{3\pi}{2}$$

$$\text{inflection points: } \frac{\pi}{4}, \frac{3\pi}{4}, \frac{5\pi}{4}, \frac{7\pi}{4}$$

$$5. \quad \text{horizontal distance: } \frac{1}{3} \text{ km}$$

$$\text{maximum height: } \frac{1}{3} e^{-1} = .123 \text{ km.}$$

$$6. \quad x = .33333333 = \frac{1}{3} \text{ km}$$

$$7. \quad \left. \frac{d\theta}{dt} \right|_{x=5 \text{ km}} = -.0200 \frac{\text{rad}}{\text{s}}$$

6 Further Review Problems

Chapter 33, page 966, # 1-25 (7 & 16 require implicit differentiation.) The following answers are for the even numbered problems:

2. $2 \ln 5 (5^{2x+3})$

4. $2 \sec^2 x \tan x$

6. $-(\arcsin 2x)^{-\frac{3}{2}} (1 - 4x^2)^{-\frac{1}{2}}$

8. $e^{2x} (2x + 1)$

10. $x^2 \cos x + 2x \sin x$

12. $(2x + 3) \cot (x^2 + 3x)$ Recall $\cot \theta = \frac{\cos \theta}{\sin \theta}$

14. $2 \log x \frac{1}{x \ln 10}$

16. $2 \csc(x - y) + 1$

18. $\frac{1}{x + 10}$

20. $\frac{2x + 3}{x^2 + 3x}$

22. $2 \sec^2 x \tan x$

24. $\arcsin 2x + \frac{2x}{\sqrt{1 - 4x^2}}$

Basic Formulas

Derivatives of Trigonometric Functions

$$\frac{d}{dx}(\sin x) = \cos x \quad (1)$$

$$\frac{d}{dx}(\cos x) = -\sin x \quad (2)$$

$$\frac{d}{dx}(\tan x) = \sec^2 x \quad (3)$$

$$\frac{d}{dx}(\cot x) = -\csc^2 x \quad (4)$$

$$\frac{d}{dx}(\sec x) = \sec x \tan x \quad (5)$$

$$\frac{d}{dx}(\csc x) = -\csc x \cot x \quad (6)$$

Derivatives of Inverse Trigonometric Functions

$$\frac{d}{dx}(\sin^{-1} x) = \frac{1}{\sqrt{1-x^2}} \quad (7)$$

$$\frac{d}{dx}(\cos^{-1} x) = \frac{-1}{\sqrt{1-x^2}} \quad (8)$$

$$\frac{d}{dx}(\tan^{-1} x) = \frac{1}{1+x^2} \quad (9)$$

$$\frac{d}{dx}(\cot^{-1} x) = \frac{-1}{1+x^2} \quad (10)$$

$$\frac{d}{dx}(\sec^{-1} x) = \frac{1}{|x|\sqrt{x^2-1}} \quad (11)$$

$$\frac{d}{dx}(\csc^{-1} x) = \frac{-1}{|x|\sqrt{x^2-1}} \quad (12)$$

Derivatives of Logarithmic Functions

$$\frac{d}{dx}(\ln x) = \frac{1}{x} \quad (13)$$

$$\frac{d}{dx}(\log_b x) = \frac{1}{x \ln b} \quad (14)$$

Derivatives of Exponential Functions

$$\frac{d}{dx}(e^x) = e^x \quad (15)$$

$$\frac{d}{dx}(b^x) = b^x \ln b \quad (16)$$

Chain Rule Formulas

Derivatives of Trigonometric Functions

$$\frac{d}{dx}(\sin u) = \cos u \frac{du}{dx} \quad (1)$$

$$\frac{d}{dx}(\cos u) = -\sin u \frac{du}{dx} \quad (2)$$

$$\frac{d}{dx}(\tan u) = \sec^2 u \frac{du}{dx} \quad (3)$$

$$\frac{d}{dx}(\cot u) = -\csc^2 u \frac{du}{dx} \quad (4)$$

$$\frac{d}{dx}(\sec u) = \sec u \tan u \frac{du}{dx} \quad (5)$$

$$\frac{d}{dx}(\csc u) = -\csc u \cot u \frac{du}{dx} \quad (6)$$

Derivatives of Inverse Trigonometric Functions

$$\frac{d}{dx}(\sin^{-1} u) = \frac{1}{\sqrt{1-u^2}} \frac{du}{dx} \quad (7)$$

$$\frac{d}{dx}(\cos^{-1} u) = \frac{-1}{\sqrt{1-u^2}} \frac{du}{dx} \quad (8)$$

$$\frac{d}{dx}(\tan^{-1} u) = \frac{1}{1+u^2} \frac{du}{dx} \quad (9)$$

$$\frac{d}{dx}(\cot^{-1} u) = \frac{-1}{1+u^2} \frac{du}{dx} \quad (10)$$

$$\frac{d}{dx}(\sec^{-1} u) = \frac{1}{|u|\sqrt{u^2-1}} \frac{du}{dx} \quad (11)$$

$$\frac{d}{dx}(\csc^{-1} u) = \frac{-1}{|u|\sqrt{u^2-1}} \frac{du}{dx} \quad (12)$$

Derivatives of Logarithmic Functions

$$\frac{d}{dx}(\ln u) = \frac{1}{u} \frac{du}{dx} \quad (13)$$

$$\frac{d}{dx}(\log_b u) = \frac{1}{u \ln b} \frac{du}{dx} \quad (14)$$

Derivatives of Exponential Functions

$$\frac{d}{dx}(e^u) = e^u \frac{du}{dx} \quad (15)$$

$$\frac{d}{dx}(b^u) = b^u \ln b \frac{du}{dx} \quad (16)$$

Version 1.3, 3 November 2008
Copyright © 2000, 2001, 2002, 2007, 2008 Free Software Foundation, Inc.
<<http://fsf.org/>>
Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

You may copy and distribute the Document in any medium, either commercially or noncommercially, provided that this License, the copyright notices, and the license notice saying this License applies to the Document are reproduced in all copies. You may not use technical measures to obstruct or control the reading or use of this License. You may not use technical measures to obstruct or control the reading or use of the copies you make or distribute. However, you may accept compensation in exchange for copies. If you distribute a large enough number of copies you must also follow the conditions in section 3.

You may charge a fee for copying, distributing, or performing the Document under this License, provided you state on the copies, under these conditions stated above, and you prominently display copies of the License and the copyright notices, and you

3. COPYING IN QUANTITY

If you publish printed copies (or copies in media that commonly have printed covers) of the Document, numbering more than 100, and the Document's license requires you to provide a front cover for the copies, each front cover must prominently display in plain text the following four lines of text. On the back cover, you must display the first line, and in addition you may also display the second, third, and fourth lines. The text in front and back covers must be printed in a font no smaller than that in the rest of the Document. If you do not wish to fulfill this obligation, you should release the Document under a license that does not require you to provide a front cover for the copies.

This License applies to any manual or other work, in any medium, that contains a notice placed by the copyright holder saying it can be distributed under the terms of this License. Such a notice grants a world-wide, royalty-free license, and gives you certain rights to copy and distribute the work. Here, "document" means any document or piece of software, regardless of whether it is printed, written, or recorded. "You" means anyone who holds a copy of the document. If you have a document that you know contains copyright material that you wish to copy or distribute, you should first check to see if the copyright holder has authorized you to do so. If you are authorized, then you may distribute the work in any medium, provided you meet the following conditions:

A **"Secondary Section"** is a named appendix or a front-matter section of a Document that deals exclusively with the relationship of the publishers or authors of the Document to the Document as a whole, or to the subject matter contained therein. For example, a Secondary Section might contain information about the Document's status within the project, the efforts to coordinate documents, or about legal or commercial transactions with the subject or with related matters, or of legal, commercial, philosophical, ethical or political position regarding them.

The **"Invariant Sections"** are certain Secondary Sections whose titles are prominent, and the content of which is primarily intended to inform the reader of new features of the Document, including any changes in the definition of "Invariant Sections" that it is not allowed to be designated as Invariant. The title of an Invariant Section shall then not be changed and the Invariant Sections shall have the same title as they are presented in the original. If the Document is not already in a format that supports annotated bibliographies, front-matter, or back-matter, the Invariant Sections shall then appear as appendices.

The "Cover Texts" are certain short passages of text that are listed, as Front-Cover Texts or Back-Cover Texts, in the notice that says that the Document is licensed under this License. A Front-Cover Text may be at most 5 words, and a Back-Cover Text may be at most 250 words.

A "Transparent" copy of the Document means a machine-readable copy, presented in a format whose specification is available to the general public, that is suitable for revising the document straightforwardly with generic text editors or text processing systems (such as *Emacs* or *TeX*), and that is suitable for input to text formatters or for automatic translation to a variety of formats suitable for input to text processors. There is no restriction on formats. For example, "transparent" copies may include machine-readable drawing code and source code, or TeX source files, or LaTeX source files, or PostScript source files, or any other format suitable for input to text formatters or for automatic translation to a variety of formats suitable for input to text processors.

A copy made in an otherwise Transparent file format whose markup, with the absence of markup, has been arranged to thwart or discourage subsequent modification by readers is not transparent. If the Document is licensed for your use under a Creative Commons license, you must also follow the Creative Commons license rules for handling the Document's text.

For the purposes of this License, the Document is in the "Public Domain" if it is not copyrighted, or if its copyright has expired, or if the copyright owner has waived all rights in it, or if an applicable copyright law otherwise declares it to be in the public domain. However, it is deemed to be in the public domain in the United States if it is published by the United States Government. It is not "Public Domain" if the copyright owner has placed a restriction on the document's use, such as the rule that the text may not be reproduced.

A copy that is not "Transparent" is called "Opaque".

Examples of suitable formats for Transparent copies include plain ASCII with a markup, TeXinfo input format, LaTeX input format, SGML or XML using a publicly available DTD, and standard-conforming simple HTML, PostScript or PDF designed for human modification. Examples of transparent image formats include PNG, JPE/JFIF, and GIF.opaque formats include proprietary formats such as XLS, PPT, and the PPT and PPTx formats from Microsoft Corporation, and others, in which the DTD and/or processing tools are not generally available, and the machine-generated HTML, PostScript or PDF produced by some word processors for output purposes only.

The “**Title Page**” means, for a printed book, the title page itself, plus such following pages as are needed to hold, legibly, the material this License requires appear in the title page. For works in formats which do not have any title page such, “Title Page” means the text near the most prominent appearance of the work’s title, preceding the beginning of the body of the text.

The **"publisher"** means any person or entity that distributes copies of the Document to the public.

A section **"Entitled XYZ"** means a named subunit of the Document whose title either is precisely XYZ or contains XYZ in parentheses following text that translates XYZ in another language. (Thus, XYZ stands for the specific section of documents entitled "XYZ," "A Short History of XYZ," or "Entitled XYZ to Understand XYZ.") The word "History" and words containing the word "History" are exceptions to this definition.

That this License applies to the Document. These Warranty Disclaimers are considered to be included by reference in this License, but only as regards disclaiming warranties; any other implication that these Warranty Disclaimers have is void and has no effect on the meaning of this License.

You may copy and distribute a Modified Version of the Document under the conditions of sections 2 and 3 above, provided that you release the Modified Version under precisely this License, with the Modified Version filling the role of the Document, thus licensing distribution and modification of the Modified Version to whoever possesses a copy of it. In addition, you must do these things to the Modified Version:

- A. Use in the Title Page (and on the covers, if any) a title distinct from that of the Document, and from those of previous versions (which should be identified in the Document, and from those of any versions of the Document that may be used to generate the Modified Version).
- B. State on the Title Page, as authors, one or more persons or entities responsible for authorship of the modifications in the Modified Version, together with their names and addresses. If the Modified Version is published by an entity other than the original publisher, the publisher may use the same title as a previous version if the original publisher of that version gives permission.
- C. State on the Title Page, as authors, one or more persons or entities responsible for authorship of the modifications in the Modified Version, together with their names and addresses. If the Modified Version is published by an entity other than the original publisher, the publisher may use the same title as a previous version if the original publisher of that version gives permission.
- D. State on the Title Page the name of the publisher of the Modified Version, together with its name and address. If the Modified Version is published by an entity other than the original publisher, the publisher may use the same title as a previous version if the original publisher of that version gives permission.
- E. Preserve all the copyright notices of the Document.

E. Add an appropriate copyright notice for your modifications adjacent to the other copyright notices.

F. Include, immediately after the copyright notices, a license notice giving the public permission to use the Modified Version under the terms of this License, in the form shown in the Addendum below.

G. Preserve in that license notice the full lists of Invariant Sections and the full lists of Cover Texts given in the Document's license notice.

H. Include an unaltered copy of this License.

I. Preserve the section entitled "History", Preserve its Title, and add to it an item stating at least the year, the new authors, and publisher of the document. (This section is intended to keep a record of the development of the document over time, to help others identify the latest version of the document, and to help determine copyright information.) Add a new section to the Document, called "History", for recording the changes. Each time you create one, change the title, use the word "History" in the Document as given on one title Page, then add an item to the list of Cover Texts on the Title Page, and add an item describing the Modified Version as stated in the preface.

J. Preserve the network location, i.e., given in the Document for public access to a Transparent copy of the Document, and likewise the network locations given in the Document for previous versions if it was based on them. These may be placed in the "History" section. You may omit a network location for a work that was published at least four years before the Document itself, or if the original publisher of the version it refers to gives

K. For any section Entitled "Acknowledgements" or "Dedications" Preserve the Title of the section, and preserve in the section all the substance and tone of each of the contributor acknowledgements and/or dedications given therein.

L. Preserve all the Invariant Sections of the Document, unaltered in their text and in their titles. Section numbers or the equivalent are not considered part of the section titles.

M. Delete any section Entitled "Endorsements". Such a section may not be included in the Modified Version.

N. Do not retile any existing section to be Entitled "Endorsements" or to conflict in title with any Invariant Section.

O. Preserve any Warranty Disclaimers.

If the Modified Version includes new front-matter sections or appendices that qualify as Secondary Sections and contain no material copied from the Document, you may at your option designate some or all of these sections as invariant. To do this, add their titles to the list of Invariant Sections in the Modified Version's

You may add a section Entitled "Endorsements", provided it contains nothing but endorsements of your Modified Version by various parties—for example, statements of peer review or that the text has been approved by an organization as the authoritative definition of a standard.

You may add a passage of up to 25 words as a Front-Cover Text, and you may add a passage of up to 25 words as a Back-Cover Text, to the end of the list of Cover Texts in the Modified Version. Only one passage of Front-Cover Text and one passage of Back-Cover Text may be added by (or through arrangements made by) any entity. If the Document already includes a cover text for the same cover text as the same entity you are adding, you may not add another; but you may replace the old one, acting on behalf of, you may not add another; but you may replace the old one. You may add a passage of up to 25 words as a Front-Cover Text, and you may add a passage of up to 25 words as a Back-Cover Text, to the end of the list of Cover Texts in the Modified Version. Only one passage of Front-Cover Text and one passage of Back-Cover Text may be added by (or through arrangements made by) any entity. If the Document already includes a cover text for the same cover text as the same entity you are adding, you may not add another; but you may replace the old one. You may add a passage of up to 25 words as a Front-Cover Text, and you may add a passage of up to 25 words as a Back-Cover Text, to the end of the list of Cover Texts in the Modified Version. Only one passage of Front-Cover Text and one passage of Back-Cover Text may be added by (or through arrangements made by) any entity. If the Document already includes a cover text for the same cover text as the same entity you are adding, you may not add another; but you may replace the old one.

The author(s) and publisher(s) of the Document do not by this License give permission to use their names for publicity for or to assert or imply endorsement of any Modified Version.

You may combine the Document with other documents released under this License, under the terms defined in section 4 above for modified versions, provided that you include in the combination all of the Invariant Sections of all of the original documents, unmodified, and list them all as Invariant Sections of your combined work in its license notice, and that you preserve all their Warranty notices.

The combined work need only contain one copy of this License, and multiple identical Invariant Sections may be replaced with a single copy. If there are multiple Invariant Sections with the same name but different contents, make the title of each such section unique by adding at the end of it, in parentheses, the name of the original author or publisher of that section if known, or else a unique number. Make the same adjustment to the section titles in the list of Invariant Sections in the license notice of the combined work.

In the combination, you must combine any sections Entitled "History" in the various original documents, forming one section Entitled "History"; likewise, you must combine any sections Entitled "Acknowledgements", and any sections Entitled "Dedications". You must delete all sections Entitled "Endorsements".

You may make a collection consisting of the Document and other documents released under this License, and replace the individual copies of this License in the documents with a single copy that is included in the collection, provided that you follow the rules of this License for verbatim copying of each of the documents in all other respects.

You may extract a single document from such a collection, and distribute it individually under this License, provided you insert a copy of this License into the extracted document, and follow this License in all other respects regarding verbatim copying of that document.

A compilation of the Document or its derivatives with other separate and independent documents or works, in or on a volume or storage or distribution medium, is called an "aggregate" if the copyright resulting from the compilation and any separate copyright in any of the individual works permit. When the Document is included in an aggregate, this License does not apply to the other works in the aggregate which are not themselves derivative works of the Document.

When the Document is included in an aggregate, it is permissible to distribute the Document, then if the Document is less than one half of the entire aggregate, the Document's Cover Texts may be placed on covers that bracket the Document within the aggregate, or the electronic equivalent of covers if the Document is in electronic form. Otherwise they must appear on printed covers that bracket the Document within the aggregate.

Translation is considered a kind of modification, so you may distribute translated versions of the Document under the terms of section 4. Replacing Invariant Sections with translations requires special permission from their copyright holders, so you may include translations of some or all Invariant Sections in addition to the original versions of all Invariant Sections. You may omit sections of the Document to provide a version optimized for a particular medium, such as screen or paper. Omissions must be justified on grounds that they would otherwise interfere with existing or future uses of the Document in other media. You may add material to a translated version of the Document on license terms of your own choice, but no such material may be called an Invariant Section. For more information on the Copyright and Trademark Disclaimers, provided that you also include the original English version of this document, you may distribute this document under the terms of the License or under a license disjunct from the translation and the original version, provided:

1. If a section in the Document is Entitled "Acknowledgements", "Dedications", or "About the Document", you must include the text of that section in the translation, with the translation of that title. Section 4.1 of the requirement (4) to Preserve the Title (1) will apply to the translation of the title.

You may not copy, modify, sublicense, or distribute the Document except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense, or distribute it is void, and will automatically terminate your rights under this License.

The Free Software Foundation may publish new, revised versions of the GNU Free Documentation License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns. See <http://www.gnu.org/copyleft/>.

Each version of the License is given a distinguishing version number. If the Document specifies that a particular numbered version of this License "or any later version" applies to the Document, you may choose any version of the License (not as a draft) by the Free Software Foundation. If the Document does not specify a version number of this License, you may choose any version ever published (not as a draft) by the Free Software Foundation. If the Document specifies that a copy can be used that is later than the version of the License that this document carries, you may choose any version of the License that is later than the version of the License that this document carries, but you must not choose a version that is later than the version of the License that this document carries.

"Massive Multiauthor Collaboration Site" (or "MMC Site") means any World Wide Web server that publishes copyrightable works and also provides prominent facilities for anybody to edit those works. A public wiki that anybody can edit is an example of such a server. A "Massive Multiauthor Collaboration" (or "MMC") contained in the site means any set of copyrightable works thus published on the MMC site.

"CC-BY-SA" means the Creative Commons Attribution-Share Alike 3.0 license published by Creative Commons Corporation, a not-for-profit corporation with a principal place of business in San Francisco, California, as well as future copy/left versions of that license published by that same organization.

"incorporate" means to publish or republish a Document, in whole or in part, as part of another Document.

An MMC is "eligible for relicensing" if it is licensed under this License, and if all works that were first published under this License somewhere other than this MMC, and subsequently incorporated in whole or in part into the MMC, (1) had no cover texts or invariant sections, and (2) were thus incorporated prior to November 1, 2008.

The operator of an MMC Site may republish an MMC contained in the site under CC-BY-SA on the same site at any time before August 1, 2009, provided the MMC is eligible for relicensing.

To use this License in a document you have written, include a copy of the License in the document and put the following copyright and license notices just after the title page:

To use this License in a document you have written, include a copy of the License in the document and put the following copyright and license notices just after the title page:

Copyright © YEAR YOUR NAME. Permission is granted to copy, distribute and/or modify this document under the terms of the GNU Free Documentation License, Version 1.3 or any later version published by the Free Software Foundation; with no Invariant Sections, no Front-Cover Texts, and no Back-Cover Texts. A copy of the license is included in the section entitled "GNU Free Documentation License".

If you have Invariant Sections, Front-Cover Texts and Back-Cover Texts, replace the “with ... Texts,” line with this:

with the Invariant Sections being LIST THEIR TITLES, with the Front-Cover Texts being LIST, and with the Back-Cover Texts being LIST.

If you have Invariant Sections without Cover Texts, or some other combination of the three, merge those two alternatives to suit the situation.

If your document contains nontrivial examples of program code, we recommend releasing these examples in parallel under your choice of free software license, such as the GNU General Public License, to permit their use in free software.
